

ABOUT

Gitpod is a one-click IDE for GitHub

Whether you want to fix a bug, have code to review or feel like trying something new on GitHub, Gitpod beams you right into a ready-to-code dev environment with a single click.

Because Gitpod is based on OSS tech like VS Code, Docker and Kubernetes, it is familiar, comprehensive, extensible, and easy to use. With deep GitHub integration, tools for sharing, and a focus on usability, Gitpod contains your entire dev workflow in a browser tab.

OVERVIEW

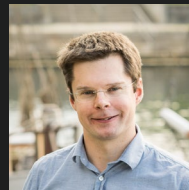

Launched: April 2019
Division of: [TypeFox GmbH](#)
Headquarters: Kiel, Germany
Team size: < 20
Active users: > 30k (May 2019)

Contact:    

THE FOUNDERS

Sven Efftinge

Moritz Eysholdt

Dr. Jan Köhnlein

USP

NO SETUP

Start coding right away.

No more „works on my machine“ situations and hour-long setups. With Gitpod, developer environments are automated, reproducible and versioned.

LESS WAITING

Gitpod is the first IDE that builds your project before you even open it.

Install the GitHub App and get ready-to-code dev environments. They are not only checked out but also compiled and tested.

MORE FLOW

Gitpod picks you up where you are and beams you into a familiar development environment.

Based on VS Code and Linux containers you have access to all your favourite tools in a browser tab.

THE TEAM

The picture was taken at one of our team events in Hvide Sande, Denmark.
